A project to undertake restoration of Mangapu River with the creation of increased riparian set-backs and planted margins.

The Waipa Catchment Plan has identified this reach of the Mangapu River as a priority river for river management works and riparian restoration. This project, on behalf of the Te Tumu Paeroa and the Te Uira A2 owners, seeks to undertake a riparian restoration throughout 2.45km of riparian margin. This restoration and enhancement will be delivered through significantly increased riparian set-backs and well planted margins, over the three years of the project. This project will continue the restoration of the Mangapu River, providing the opportunity for continued local community connection and action. WRA15-001
