 Website

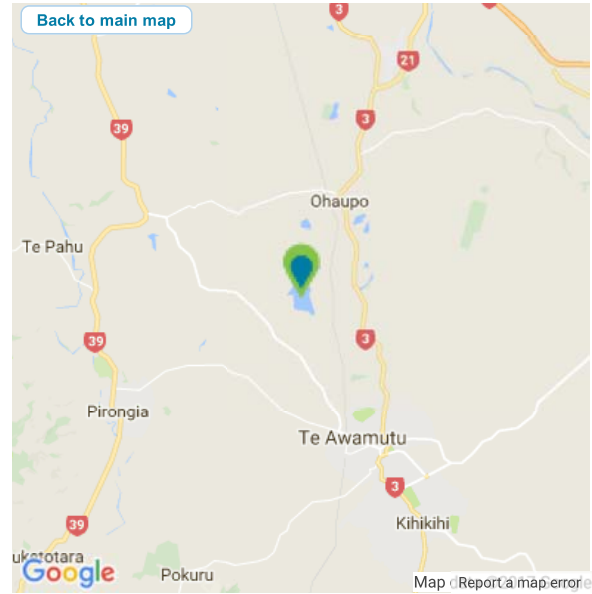

To develop a cost integrated management plan for the restoration of Lake Ngaroto.

The objectives of this project are to develop a cost integrated management plan and implementation programme for the preservation and enhancement of Lake Ngaroto.

This project also looks at the surrounding catchment to not only achieve significant environmental, cultural and recreational improvements for the specific catchment but to also establish a good practice example that can be used to assist the preservation of other nationally significant peat lakes and wetlands in the Waikato.

The project is funded by the Waikato River Authority (WRA 11-115)
