To remove exotic invasive vegetation from the west side of the Waikato River, from the Parry Street boat ramp at Huntly downstream for three kilometres.

The primary objective of this project is to help improve the health and quality of the Waikato River by removing all exotic invasive vegetation from the banks of the Waikato River from the Parry Street boat ramp for a distance of 3 kms downstream so that indigenous planting of the cleared area can be completed and maintained.

This rehabilitation initiative will commence in April 2012 with completion of removal activities targeted by June end 2015 for this identified section.

The project is being funded by the Waikato River Authority (WRA 11-085)
