## MY SUBMISSION IS THAT

Tell us the reasons why you support or oppose or wish to have the specific provisions amended. (Please continue on separate sheet(s) if necessary).

The overall time-line need to be halved, i.e. from 80 yrs to 40 yrs. Each time-bound step along the way also needs to be achieved in half the time.

The use of OVERSEER® as the primary monitoring and management tool needs to be reviewed. There are too many questions about its accuracy and utility. This issue needs to be independently reviewed, and alternative techniques considered such as direct limits on the intensity and nature of use and nutrient input in relation to soil type, topography and weather/climate for each farm. This might be more expensive, but whatever technique is used needs to be demonstrably fit-for-purpose.

Much pollutant run-off can be managed relatively easily and visibly by riparian strip planting and the creation of wetland traps for phosphorous, sediment, agrochemicals and E. coli. Nitrate leaching into ground water is the tough one; it is hard to measure (OVERSEER® 6.2 is a blunt instrument), and can only be reduced by limiting the intensity of farming (especially cattle). Intensity and type of land use is the primary issue to be addressed in this plan.

Outcome monitoring in the region's waterways needs to be sufficient to ensure SMART objectives (Specific, Measurable, Achievable, Realistic & Time-bound) are met.
